Project Manager - IT Transformation & Infrastructure

ECIT is growing through both organic development and acquisitions across the Nordics and Europe. Corporate IT is responsible for establishing common IT services and progressively integrating and standardizing the IT environments of ECIT companies.
The Project Manager – IT Transformation & Infrastructure will lead transformation, integration and migration projects across Corporate IT. Typical projects include post-merger IT integrations, infrastructure and workplace migrations, service transitions and other cross-functional transformation initiatives.
The role works across Corporate IT service owners, ECIT companies and divisions, business stakeholders, and internal and external delivery partners. The position will also contribute to establishing and developing a permanent internal project-management capability within Corporate IT.

Key responsibilities

- Lead IT transformation, integration and migration projects end-to-end, from planning through implementation, handover and closure.
- Lead post-merger IT integration and harmonization projects following acquisitions.
- Take ownership of assigned projects, establishing clear scope, plans, milestones, dependencies and responsibilities.
- Coordinate delivery across Corporate IT service owners, business stakeholders, ECIT companies and external delivery partners.
- Actively manage risks, issues, dependencies, budgets and decisions, and ensure timely escalation where required.
- Drive stakeholders and delivery partners towards agreed commitments and outcomes.
- Provide clear and concise project reporting and decision material to management and relevant governance forums.
- Ensure effective transition from project delivery into operational ownership.
- Contribute to developing Corporate IT's project-management practices, governance and ways of working.

Experience and qualifications

We are looking for someone with solid project-management experience, preferably involving IT transformation, integration, infrastructure or service transition.
Relevant experience includes:

- Successful delivery of complex, cross-functional IT projects.
- Experience working across multiple companies, business units, locations or countries.
- Experience with IT transformation, infrastructure migration, service transition or similar initiatives.
- Experience with post-merger integration, acquisitions or other organizational change is an advantage.
- Experience coordinating internal teams, business stakeholders and external suppliers.
- Good understanding of enterprise IT infrastructure and workplace services, sufficient to work effectively with technical specialists and delivery partners.

Relevant higher education or equivalent professional experience is desirable. Project-management certification such as PRINCE2 or PMP is an advantage, but demonstrated ability to successfully deliver projects is more important.

Personal profile

We are looking for someone who:

•Takes ownership and has a strong drive to move projects forward.
•Is structured, pragmatic and comfortable working hands-on.
•Builds trust and gets things done across organizational boundaries without relying on formal authority.
•Communicates effectively with technical specialists, suppliers, business stakeholders and senior management.
•Is comfortable managing changing priorities in a growing and evolving organization.
•Focuses on outcomes and completed delivery rather than project administration alone.

Language and travel
•Professional proficiency in English.
•Norwegian, Swedish or Danish language skills are highly desirable.
•Willingness to travel within Europe as required.

Is this something for you?
Please aply through the "Søk her" button in the ad. If you have questions - you are welcome to send an email to SVP Corporate IT, Hugo Klemmestad at hugo.klemmestad@ecit.com

About ECIT
ECIT is one of the Nordic region's largest technology and finance groups, with around 3,500 employees and annual revenue of approximately NOK 5 billion. We bring together the expertise our customers need within finance, IT and business solutions, all in one place.
Since ECIT was founded in 2013, we have grown significantly and are now present in Norway, Sweden, Denmark, the UK, Poland, Lithuania, Germany, Finland, Romania and Iceland. At the same time, we have maintained much of the entrepreneurial spirit that has been part of ECIT from the beginning. We continue to have ambitious growth plans, and as part of ECIT, you will have the opportunity to develop, take responsibility and help shape our journey ahead.
Our culture is built around four core values: **Integrity, Courage, Open Communication and Entrepreneurship**. These values are more than words on paper. They guide how we work together, make decisions and develop both our people and our business.
